

I compiled this list this morning on the way to work of the RPM's in 5th gear from 50 to 90. These are after the UNI filter mod:

50 - 3000K  
55 - 3300K  
60 - 3600K  
65 - 3900K  
70 - 4100K  
75 - 4500K  
80 - 4900K  
85 - 5100K  
90 - 5500K

These number might be a touch off since my tach only goes in increments of 500, but pretty close.

You see, at 85, she's not even sweating!
